Fidwyn EPM

Remove standing local administrator rights and grant privilege per application, delivered by a patented next-generation agent engineered for a minimal footprint and negligible resource use — light enough to run everywhere.

CAPABILITIES

- **Application Elevation**
  Auto-elevate trusted apps, require justified approval, or audit; scope by user, PAM group, AD DN or executable set.
- **Patch Management**
  CVE-driven patch tasks with deadlines, targeted by AD tree, tag or device, tracked against CPE identifiers by severity.
- **Elevation Recording**
  Elevated sessions recorded with keystroke logs and video, reviewable event by event.
- **App Blocks**
  Block execution via IFEO, Software Restriction Policy, process termination or service disable, with bypass hardening.
- **Software Inventory**
  Fleet-wide inventory across Win32, Appx, winget and Microsoft Store, flagging outdated and unmatched software.
- **Peer-to-Peer Distribution**
  Agents elect a subnet seeder to distribute patches and apps, so a WAN link is never saturated.

AT A GLANCE

Featherweight	Negligible	GPO
ENDPOINT AGENT	CPU AND RAM	MANAGED ROLLOUT

Runs where others cannot.
The agent deploys transparently, runs invisibly and never competes with the workloads it protects — including domain controllers — without a capacity conversation.
